Regarding claim 8, the cited prior art neither teach nor fairly suggest a measurement circuit for use in a combustible gas sensor, wherein the measurement circuit comprises a catalytically-active element in electrical connection with a thermistor network adapted to compensate for the effect of changes in ambient temperature to the resistance of the catalytically-active element without compensating for heat lost by the thermal conduction from the catalytically-active element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
